

Reasoning says RELEASE. The gripper remains CLOSED.

FULL POLICY REASONING

PLAN: 1. move to the black book, 2. grasp the black book, 3. move the black book to the desk caddy, 4. release the black book into the front compartment of the desk caddy

VISIBLE OBJECTS: black book 1 [73, 56, 111, 90], white yellow mug 1 [140, 91, 179, 134], desk caddy 1 [73, 18, 129, 130]

SUBTASK REASONING: The robot has successfully grasped the black book and moved it to the desk caddy, so the next logical step is to release it into the front compartment.

SUBTASK: release the black book into the front compartment of the desk caddy

MOVE REASONING: The caddy is positioned further back on the table, so moving down and forward allows the robot to approach the black book from the correct angle to release it into the front compartment.

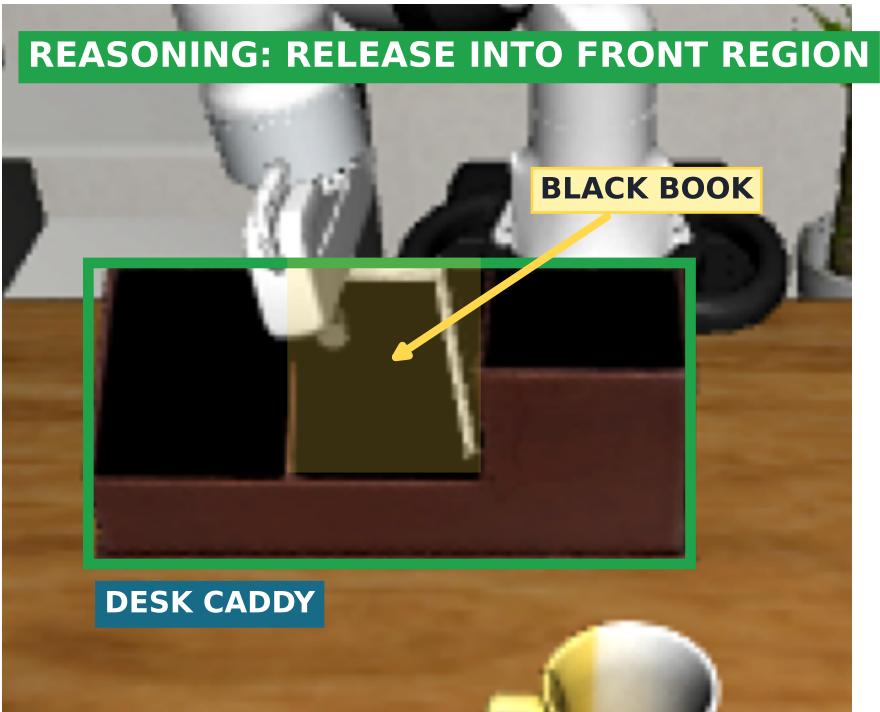

MOVE: move down and forward

GRIPPER POSITION: [68, 59]

EXECUTED ACTION

By the end of the chunk, the book had entered the requested front-compartment region. The reasoning said RELEASE, but the gripper remained closed and the book remained grasped.

Kinematic: ALIGNED (1.000)
Placement: CORRECT FRONT REGION
Gripper after chunk: CLOSED
Book after chunk: STILL GRASPED
Release subtask: INCOMPLETE (0.000)

REASONING-ACTION ERROR — reasoning correctly says RELEASE; execution keeps the gripper CLOSED
